

BCTC supports AESO's investigation of potential services that support the restoration of intertie capacity and would be willing to participate in both the LSSI and GRAS working groups.

In the discussion paper, AESO seemed to discuss the proposed products specifically with respect to the BC/AB intertie. BCTC would like to clarify it is AESO's intention that the products discussed in the paper are specifically used to relieve the constraints on the BC/AB intertie. If not, has AESO determined how the capacities created by the proposed products be allocated to different interties?

BCTC is also interested in AESO plan and timeline in restoring intertie capacities to their line ratings as directed by the Government of Alberta.
